4. CTP delivery rate vs. the star protocol under static conditions for 8 nodes network. CTP achieves reliable performance across *all* nodes.

are mounted on the suspension system; node 8 is located on the dashboard, next to the light sensor; and node 10 is placed in the middle of the trunk. The packet generation rate is 1000 packets/sec per node and the transmission power is  $-10$  dBm. CTP delivery routes are shown in Fig.3. The delivery rates of both protocols are shown in Fig. 4, which illustrates that all nodes in the network achieve higher delivery rate than the star protocol. In fact, different nodes in the star protocol achieve variant levels of reliability, but CTP will reduce variance in performance across the different nodes and all of them achieve higher than
